

Career Profile

.NET / Java backend developer with 5+ years across financial-compliance systems, operational intelligence workflows, and modern SaaS architectures. I focus on transforming static, manual systems into database-driven, scalable platforms — and on building automations that hold data integrity under heavy transactional load.

At U&G Consulting, I built the **Fineksus**, **Uyumbaz** and **U&G Blacklist** systems within MASAK (Turkey's anti-money-laundering authority) scope — automatically detecting customers, partners and shareholders with frozen assets and routing transactions into intelligence pipelines. I designed a **multi-threaded module architecture** that runs **13 Windows services on isolated cores**, eliminating contention and unifying development, deployment and operations.

I have end-to-end design and development experience on modern SaaS applications built with ASP.NET Core 9 + EF Core 9 + PostgreSQL, deployed on AWS (Elastic Beanstalk, RDS, S3) and wired with multi-channel notification stacks across Firebase Cloud Messaging, Web Push (VAPID), Netgsm SMS and MailKit/SMTP.

I own DevOps and CI/CD as well: self-hosted GitLab + SonarQube workflows, GitLab API v3→v4 migration, OracleLinux administration, automated release-note compilation and customer notification pipelines.

Earlier, as **founder of Geik.xyz & GEdition**, I shipped **14+ custom Java/Spigot plugins**, a REST-based licensing library with Discord-bot and socket integration, and reached **500+ customers** and **1000+ license sales** — a 3-year track record of running a product end-to-end.

I value clean architecture, performance optimization, customer-driven problem solving and long-lived solutions, and aim to make a long-term contribution to the team I join.

Technical Skills

Programming Languages

- C# (.NET 9 / .NET Core / .NET Framework)
- Java (Spring, Hibernate, Spigot)
- JavaScript / TypeScript
- Oracle SQL — Procedure · Function · Package · Trigger
- Python · Bash

Frameworks & Backend

- ASP.NET Core 9 MVC + Razor Pages
- ASP.NET (2.0 / 4.5 / 8.0)
- Web Services · Windows Services
- Entity Framework Core 9
- Spring Framework · Hibernate
- SignalR · WebSocket · REST · SOAP

Databases & Performance

- Oracle — Procedure, Function, Package, Trigger
- Index strategy · query tuning · cost analysis
- PostgreSQL (AWS RDS) · MySQL · SQLite
- EF Core Migrations
- Audit, logging & storage management

Cloud & System Operations

- AWS — Elastic Beanstalk, RDS, S3
- Oracle Linux & Oracle Database administration
- IIS & Windows Service development
- Multi-threading / isolated-core modules
- Job / Scheduler-based periodic tasks

Integrations & Security

- MASAK compliance (Fineksus, Uyumbaz)
- JWT Authentication & Authorization
- Role-based access control (RBAC)
- Firebase Cloud Messaging · Web Push (VAPID)
- Netgsm SMS · MailKit (SMTP)
- GitLab API (v3 & v4) integrations

DevOps & Tools

- Self-hosted GitLab · GitLab CI/CD
- Automated build · deployment · release-notes pipelines
- SonarQube · code-quality gates
- ClosedXML · GemBox · PDFSharp · PuppeteerSharp
- Git · Visual Studio · VS Code · Rider

Work Experience

Software Developer • U&G Consulting Inc.

Istanbul / Fatih • December 2023 – Present

- .NET (C#, ASP.NET, Web/Windows Services)
- ASP.NET Core 9 • EF Core 9
- Java • Spring • Hibernate
- Oracle SQL • PostgreSQL
- Oracle Linux
- REST • SOAP • SignalR
- JWT • RBAC
- GitLab CI • SonarQube
- PuppeteerSharp • GemBox • PDFSharp

Application, Integration & Security

- Translate analyst-defined customer requirements into technical specifications and ship software solutions; deliver fast iterative development, updates and improvements on existing systems.
- .NET (C#, ASP.NET, Web Services, Windows Services) for enterprise integrations; REST & SOAP services for external-system interoperability.
- Designed a multi-threading module architecture running 13 Windows services on isolated cores, unifying development, deployment and operations under a single management surface.
- JWT-based Authentication & Authorization; role and permission-based access control (RBAC).

Financial Compliance & Operational Intelligence

- Built the **Fineksus**, **Uyumbaz** and **U&G Blacklist** systems within MASAK scope — auto-detecting customers, partners and shareholders with frozen assets and routing transactions into intelligence pipelines.
- Migrated static reporting structures into dynamic, database-driven, customer-centric architectures.

Document & Data Processing Automation

- Read XML invoices, persist them in tables, then extract embedded HTML content and merge it into a **single consolidated PDF per transaction**.
- Decode QR codes (including check barcodes) on invoice images to validate transactions and automate data entry.
- Built a Google Maps API module driven by an interactive Stored Procedure that draws dynamic overlays from table data.

Oracle Database, Performance & System Operations

- Heavy **procedure, function, package and trigger** development; refactoring and performance optimization on high-volume financial systems.
- Indexing strategy, query tuning and **cost analysis** to improve data quality and transaction throughput under load.
- Oracle Linux & Oracle Database administration; audit/logging configuration and storage planning.
- JOB-based periodic processing and performance optimizations.

DevOps • CI/CD • Process Automation

- Built a self-hosted GitLab + SonarQube workflow, automating code-quality analysis and optimizing continuous-integration steps.
- Managed the staged upgrade of self-hosted GitLab and Oracle Linux, modernizing API integrations from v3 to v4.
- Built a GitLab-API integration that calculates and reports time spent per request; replicated a Jira-like flow across customer, support and engineering steps.
- Built end-to-end GitLab CI/CD pipelines covering **automated build → deploy → release-note compilation**; resolved-ticket customer notifications fire from the same pipeline.

Founder & Java Developer • Geik.xyz & GEdition

Istanbul • June 2020 – June 2023

- Java
- Spigot / Paper API
- MySQL • PostgreSQL • SQLite
- REST API
- Discord Bot
- Socket / WebSocket

- Built **14+ custom plugins** for the Minecraft ecosystem — a modular product family covering automation, economy, ranking, support and user-engagement domains.
- Developed a Java licensing library integrated with a REST API license-validation backend; added Discord Bot and socket layers for role sync and real-time purchase notifications.

- Reached **500+ customers** and **1000+ license sales** — owned product management, pricing, customer support and digital marketing end-to-end.

Education

Anadolu University · Open Education Faculty

Computer Programming, Associate Degree · Sep 2021 – Jan 2026

Akdeniz University

Mechatronics, Associate Degree · Sep 2018 – Jun 2021

Languages

- Turkish — Native
- English — Intermediate (Reading / Writing, Technical Documentation)

Other

- Military Service: **Completed**
- Work Model: Remote · Hybrid · On-site (Istanbul)
- Nationality: TR · Gender: Male
- Portfolio: poyrazinan.com.tr
